

Vodafone Group Reference for Brilliant Telecom

Brilliant Telecom Inc (BTI) has been working with Vodafone Group for several years to evaluate and prove the suitability of IEEE1588 for deployment within the VF Group of companies.

The engagement has included a significant amount of lab testing and product development activity between both companies and which ultimately culminated in the world's first commercial IEEE1588 deployment with VF Portugal. In addition IEEE1588 was selected as a VF Group standard as one of only two approved technologies within VF Group for IP based synchronisation (the other is Synchronous Ethernet).

Brilliant Telecom has worked closely with VF Group and has developed a number of features specifically for VF Group companies and has delivered a commercial framework that is yielding very strong Returns on Investment for Operating Companies.
